

Waste Services Single Provider Pros and Cons

Pros:

- 1. Lower cost** to residents subscribing to waste services
- 2. Less damage** to area roads. Currently, five or six waste haulers may travel the same roads over a week's time. Single provider service collection could limit this to one truck per week.
- 3. Greater safety** to residents and motorists. Fewer trucks traveling the roads reduces the probability of accidents especially with children playing and school bus routes.
- 4. Cleaner environment and residential premises** by assuring all residents have access to regular and legal trash disposal.

Cons:

1. Requires diligent preparation of bid specifications (time intensive).
2. Some residents may have a favorite hauler that ultimately isn't selected.
3. Requires additional work to assure smooth operation especially in the start-up period (resources).
